1. The following is an examiner's statement of reasons for allowance:

The invention is directed to feeding a printing sheet to an image forming unit from a sheet supply unit being disposed in parallel with the image forming unit.

Independent claim 1 identifies the uniquely distinct features of "wherein sheet feeding paths from at least some of the sheet supply trays to the image forming unit are constructed as a bypass feeding path extending from the farther sides of the sheet supply trays from the image forming unit, and a cover which is opened and closed disposed to face the bypass feeding path is provided to the farther side of the unit case from the image forming unit."

Independent claim 4 identifies the uniquely distinct features of "sheet feeding paths from at least some of the sheet supply trays are constructed as a bypass feeding path extending from the farther sides of the sheet supply trays from the image forming unit, and a cover which is opened or closed and disposed to face the bypass feeding path is provided to the farther side of the unit case from the image forming unit."

The closest prior arts Ushio et al (US 5,528,353) disclosed a conventional method of feeding a printing sheet to an image forming unit from a sheet supply unit (41A, 41B, 41C, fig. 1) being disposed in parallel with the image forming unit (3, fig. 1); either singularly or in combination fail to anticipate or render the above underlined limitations obvious (to be used with other claimed limitations).
